

# COST SHEET

## LEARNING OUTCOMES

- ❑ Classify and ascertain cost on the basis of function.
- ❑ Prepare cost sheet/statement for production of goods and providing of services.

## CHAPTER OVERVIEW

## 6.1 INTRODUCTION

One of the objectives of cost accounting system is ascertainment of cost for a cost object. The cost objects may be a product, service or any cost centre. **Ascertainment of cost includes elementwise collection of costs, accumulation**

**of the costs so collected for a certain volume or period and then arrange all these accumulated costs into a sheet to calculate total cost for the cost object.** In this chapter, a product or a service will be the cost object for cost calculation and cost ascertainment. **A Cost Sheet or Cost Statement is “a document which provides a detailed cost information.** In a typical cost sheet, cost information are presented on the basis of functional classification. However, other classification may also be adopted as per the requirements of users of the information.

## 6.2 FUNCTIONAL CLASSIFICATION OF ELEMENTS OF COST

Under this classification, costs are divided according to the function for which they have been incurred. The following are the classification of costs based on functions:

- (i) Direct Material Cost
- (ii) Direct Employee (labour) Cost
- (iii) Direct Expenses
- (iv) Production/ Manufacturing Overheads
- (v) Administration Overheads
- (vi) Selling Overheads
- (vii) Distribution Overheads
- (viii) Research and Development costs etc.

## 6.3 COST HEADS IN A COST SHEET

The costs as classified on the basis of functions are grouped into the following cost heads in a cost sheet:

- (i) Prime Cost
- (ii) Cost of Production
- (iii) Cost of Goods Sold
- (iv) Cost of Sales

### 6.3.1 Prime Cost

**Prime cost represents the total of direct materials costs, direct employee (labour) costs and direct expenses.** The total of cost for each element has to be calculated separately.

Direct Material Cost	xxx
Direct Employees (labour) Cost	xxx
Direct Expenses	xxx
<b>Prime Cost:</b>	xxxx

**(i) Direct Material Cost:** It is the cost of direct material consumed. The cost of direct material consumed is calculated as follows:

Opening Stock of Material	xxx
Add: Additions/ Purchases	xxx
Less: Closing stock of Material	(xxx)
<b>Direct materials consumed</b>	xxxx

The valuation of materials purchased and issued for production shall be done as per methods discussed in the 'Chapter- 2 Material Cost'. Few examples are:

- (a) Cost of material;
- (b) Freight inwards;
- (c) Insurance and other expenditure directly attributable to procurement;
- (d) Trade discounts or rebates (to be deducted);
- (e) Duties & Taxes (if input tax credit is not available/ availed) etc.

**(ii) Direct Employee (labour) Cost:** It is the total of payment made to the employees who are engaged in the production of goods and provision of services. Employee cost is also known as labour cost; it includes the following:

- (a) Wages and salary;
- (b) Allowances and incentives;

**(iii) Direct Expenses: Expenses other than direct material cost and direct employee cost**, which are incurred to manufacture a product or for provision of service and can be directly traced in an economically feasible manner to a cost object. The following costs are examples for direct expenses:

- (a) Cost of utilities such as power & fuel, steam etc.;
- (b) Royalty paid/ payable for production or provision of service;
- (c) Hire charges paid for hiring specific equipment;
- (d) Fee for technical assistance and know-how;
- (e) Amortised cost of moulds, patterns, patents etc.;
- (f) Cost for product/ service specific design or drawing;
- (g) Cost of product/ service specific software;
- (h) Other expenses which are directly related with the production of goods or provision of service.

### 6.3.2 Cost of Production

In a conventional cost sheet, this item of cost can be seen. **It is the total of prime cost and factory related costs and overheads.**

<b>Prime Cost</b>	xxx
Add : Factory Overheads	xxx
<b>Gross Works Costs</b>	xxxx
Add: Opening stock of Work-in-process	xxx
Less: Closing stock of Work-in-process	(xxx)
<b>Factory or Works Costs</b>	xxxx

**(ii) Stock of Work-in-process:** The cost of opening and closing stock of work-in-process (WIP) is adjusted to arrive at factory/ works cost. The WIP stock is valued on the basis of percentage of completion in respect of each element of cost. Students may refer the 'Chapter- Process & Operation Costing' to know the WIP valuation methods.

**(iii) Quality Control Cost:** This is the cost of resources consumed towards quality control procedures.

**(iv) Research & Development cost:** It includes only those research and development related cost which is incurred for the improvement of process, system, product or services.

**(v) Administrative Overheads:** It includes only those administration overheads which are related to production. The general administration overhead is not included in production cost.

**(vi) Credit for recoveries:** The realised or realisable value of scrap or waste is deducted as it reduces the cost of production.
